

Letter of Recommendation

Date: 25th July 2021

These are the few words I would like to say about **Ennam Pranay** who took internship from us in his Final Year study, and after completion of his degree we observed him as Design and Execution Engineer for PLC and Automation works.

During some of the project's executions his Ideas on Screens development in HMI for animation is appreciative. He did PCB designs too for so many different applications. For those applications readymade solutions were not available in the present market. He acquired good knowledge in executing the projects, his ideas were implemented in many projects, they are working till date with no warning Alarms. End users are quite happy with the critical logics what he developed for their applications.

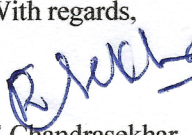

His technical knowledge is impressive, he is a quick understanding in nature and can be able to implement new logic Ideas in the system which exactly suits to the application.

I would like to express that his knowledge in different Controllers, PLC based Automation, selection of field Sensors and selection of digital electronics components was given quick solution to most of the projects and used by us in making design decisions.

I have absolute confidence in his intellectual readiness for this Graduate Electrical Engineering program. I know he will not turn back from his efforts in the direction of excellence.

Through your University teaching efforts and your Advanced Research Infrastructure, he will surely see the extreme limits of his true potential.

With regards,

E Chandrasekhar
